Revision 1

June 2016

## IMPORTANT RX LITES TEAM BULLETIN

The following RX Lites bulletin is to remind teams that the engine oil level must be filled to the top baffle in the oil tank.

The engine oil level must be checked regularly during the course of race events and testing to ensure the engine oil level is maintained at the top baffle in the oil tank.

It is only the team's responsibility to maintain the oil level.

**Failure to do this will result in oil surge and engine damage / failure.**

### Oil specification

A fully synthetic oil of viscosity range 10W60 should be used such as Castrol, Mobil 1 & Royal Purple. Agreement to use oil must be made with Mountune prior to engine operation.
