AV5438_001 Reinforcement Kit for Front Frame			

A new kit is available to reinforce the front suspension and front rocker arm mounting points: AV5438_001 Reinforcement Kit for Front Frame

This kit shall improve the stiffness of the chassis against the deformations caused by the bottoming out of the car after hard landings due to soft suspension settings. The kit consists of 6 individual brackets which are to be welded to the front frame tubular structure and the respective mounting brackets. Below are the pictures defining the brackets and their positioning.
